

Project Overview

This project is a complete AI-powered ecommerce ordering system developed using modern no-code and automation tools. The system allows users to browse products, add items to cart, place orders, and receive email confirmations.

The goal of this project is to automate the entire ecommerce workflow including user authentication, product management, and order processing.

Project Overview

This project is a complete AI-powered ecommerce ordering system developed using modern no-code and automation tools. The system allows users to browse products, add items to cart, place orders, and receive email confirmations.

The goal of this project is to automate the entire ecommerce workflow including user authentication, product management, and order processing.

Features

- User Registration and Login
- Email Verification System
- Product Listing (Shoes, Clothing, Accessories)
- Category Filtering (Men, Women, Kids)
- Add to Cart Functionality
- Order Creation System
- Email Confirmation via Gmail
- Admin Product Management

Features

- User Registration and Login
- Email Verification System
- Product Listing (Shoes, Clothing, Accessories)
- Category Filtering (Men, Women, Kids)
- Add to Cart Functionality
- Order Creation System
- Email Confirmation via Gmail
- Admin Product Management

Technologies Used

- Frontend: Lovable AI
- Backend: n8n (Workflow Automation)
- Database: Google Sheets
- Email Service: Gmail
- Hosting: n8n Server + Lovable App

API Endpoints

Authentication

Register

<https://n8n.faridaqaisar.site/webhook/auth/register>

Login

<https://n8n.faridaqaisar.site/webhook/auth/login>

Verify Email

<https://n8n.faridaqaisar.site/webhook/auth/verify-email>

Products

Add Product

<https://n8n.faridaqaisar.site/webhook/add>

Get Products

<https://n8n.faridaqaisar.site/webhook/products>

Orders

Create Order

<https://n8n.faridaqaisar.site/webhook/create-order>

Get Orders

<https://n8n.faridaqaisar.site/webhook/get-orders>

System Workflow

User Authentication Flow

1. User registers with name, email, and password
 2. System sends verification email
 3. User verifies email using token
 4. User logs in with email and password
-

Product Flow

1. Admin adds products using form
 2. Product data stored in Google Sheets
 3. Frontend fetches products using webhook
 4. Products displayed on dashboard
-

Order Flow

1. User selects product
2. Adds product to cart
3. Creates order
4. Order saved in Google Sheets
5. Confirmation email sent to user

Database Structure (Google Sheets)

Users Table

- id
 - name
 - email
 - password
 - is_verified
 - verification_token
-

Products Table

- product_id
 - name
 - price
 - image_url
 - stock
 - gender (men/women/kids)
 - category (shoes/clothing/accessories)
-

Orders Table

- order_id
- total_amount

- status
- items_json
- customer_email
- Created_at

Email System

- Gmail is used for sending emails
- Verification emails sent during registration
- Order confirmation emails sent after order creation

Challenges Faced

- Handling boolean values from Google Sheets
- Managing webhook data structure
- Parsing JSON data for order items
- Fixing duplicate entries in Google Sheets
- Debugging API and workflow errors

Conclusion

This project successfully demonstrates how to build a complete ecommerce system using no-code tools and automation. It provides a scalable and efficient solution for managing products, users, and orders.
